

REMARKS

Very thanks for Examination's suggestion and thanks for finding some citations about the present invention, thereby, the applicant may know more information about the invention. This case has been carefully reviewed and analyzed in view of the office action. All details of the reference prior arts are fully considered and compared with the present invention.

ABOUT THE REJECTION BY 35USC112

All the errors disclosed in the office action by using 35 USC 112 has been amended in the new claim 16.

ABOUT CLAIM REJECTION OF 35USC 102 and 203

Indeed the citations disclose some features of the present invention, and the applicant agrees with these viewpoints, however applicant discovers that some main features of the present invention are not disclosed in the citation which can form the novelty and inventive step of the present invention.

To illustrate the novelty of the present invention and overcome the objection from the citations, the applicant decides to cancel Claims 1 to 15, without prejudice or disclaimer of the subject matter thereof, and add new claim 16. The added new claim 8 is the combination of original claims 1 to 15.

The added part not disclosed in the original claims 1 to 15 are

(A) “the two pockets 21 are separated at one end and are closed at another end; and the pockets are opened at the ends near the separation of the two pockets and the at another end of each pocket is closed; and the two arms 32 are inserted into the two pockets from the end that the two pockets are separated.”

This part can be seen in the Fig. 6 of the present invention

(B) “said handle includes at least one projection 33 extended from a lower side of each of said arms,”

This part can be seen in Fig. 6 of the present invention.

DISCUSSION ABOUT THE NOVELTY OF THE PRESENT INVENTION

The new claim 16 is the combination of the original claims 1 to 15 and some new features disclosed in the drawings of the present invention and thus it has combined many different technologies into one invention.

(A) There are fourth citations being disclosed in the present invention, which are USP6,813,801, USP2004/0016074, USP1,922,450, USP4,116,205.

The citation ‘801 discloses the technology about a cleaning article.

The citation ‘450 discloses a gauge rod wiper.

The citation ‘205 discloses a foldable hair brush.

The citation ‘074 discloses a cleaning article.

Thereby the present invention combines the technology used in cleaning articles, gauge rod wipers, foldable hair brushes which are belonged to different fields.

(B) Furthermore, in the claim 16, we add the following features:

and the two pockets are separated at one end and are closed at another end; and the two arms are inserted into the two pockets from the end that the two pockets are separated; and the pockets are opened at the ends near the separation of the two pockets and the at another end of each pocket is closed.”

However by arranging the two pockets to separate from each other will cause the user to be convenient in cleaning operation. This is because the front side of the device has a wide coverage since the cloth is expanded. The feature is illustrated in Fig. 1 of the present invention.

Moreover, in the present invention, the handle is pivotally installed to the pockets, the handle and the cleaning cloth are located at different planes. Thus, in operation, the openings of the pockets are at a higher place and another end of each pocket is closed. As a result dusts will not flow into the pockets. This affect cannot be achieved by any citation.

(C) In the citation ‘450, see Fig. 1 of the citation, the two pockets are separated at the insertion end of the fork, but in citation ‘450, the forks are inserted into the cloth from the close end of the pocket. The structure of the citation ‘450 is very different from the present invention.

(D) In the present invention, “said handle includes at least one projection extended from a lower side of each of said arms,” which is illustrated in Fig. 6 of the present invention, however in citation ’07, the projection (24, see Fig. 1 of the citation) is at the lateral sides.

(E) For the combinations of the citations

From above discussion, it is known that the combination of all the citations cannot have the feature of illustrated in Fig. (B) to (D) and thus these features builds the novelty of the present invention.

Although other features can be seen in the other citations, from the office action, it is known that the present invention combines the features in

various citations so as to form a powerful device, which cannot be achieved by any of the citations.

(F) RESULT

Since in above discussion, it is apparent that no prior art has the features of the present invention, especially in new claim 16. Furthermore, as we know that no other prior art has features of the present invention. Thus, the present invention is novel and inventive.

If there is any error in the specification, or claims, applicant requests and authorizes Examiner to amend the claims, specification and drawings of the present invention so that they can match the requirement of U. S. Patent. Attentions of Examiner to this matter are greatly appreciated.

It is now believed that the subject Patent Application has been placed in condition for allowance, and such action is respectively requested.

Respectfully submitted.
